# What Makes Us ÜberGrade?

	Drive with Speed, Quality and Confidence
RECESSED STAR DRIVE	Zero Stripping, with (6) points of contact
CEE THREAD™	Enlarges hole to reduce splitting and install torque
	Low torque, smoother drive, and reduce splitting
W-CUT™	No pre-drilling, faster penetration
ZIP-TIP™	and reduce splitting Full breadth of line meeting remodeling and new construction fastening needs for: Decks, Framing, Trim, Cabinets, Windows, Doors and more.

BUILDING CODE APPROVED—for structural use in treated lumber. GRK screws have been evaluated for structural and AC257 corrosion resistance to be in compliance with IBC/IRC specifications. That's why all our fasteners come with a limited lifetime warranty, so you can rest assured your installations will last the life of your project.

# Fastener Selection Guide and Quick Reference Product Locator

Always build your project according to current ICC (International Code Council) specifications. GRK's Climatek<sup>®</sup> coating meets or exceeds standards, including AC257, for use in various type of preservative treated wood. Please view ICC Report #ESR-2442, ESR-3201 and ESR-3251 for more details. Visit http://www.grkfasteners.ca/index.php/en/techdata/code-approvals.

No pre-drilling required for most GRK products, unless required or specified by building material. Always place deck boards with outer edge of growth rings facing up (bark side up). Do not use deck cleaners which contain bleach with coated metals. Consult building material supplier's/manufacturer's recommendations for exact instructions. Decking screws should be countersunk 1/8".

### AUGERBOLT™ THROUGH BOLT FASTENING

GRK's newest product, the Augerbolt simplifies the installation process of throughbolts by combining the drilling and install steps and eliminating loose components. Offering time savings of up to two times faster than standard throughbolt installation.

#### R4™ MULTI-PURPOSE FRAMING SCREWS:

Frame with ease and confidence. Multi-use screw for wood, particle board, sheet metal, cement fibre board, laminate and wood decking and melamine. They are self tapping eliminating pre-drilling featuring a countersinking head with cutting teeth, W-Cut<sup>™</sup> for reducing splitting, CEE Thread<sup>™</sup> for no splitting, reducing install torque and our Climatek<sup>™</sup> AC257 code approved coating.

For Southern Yellow Pine use #10. For use in all applications including pressure treated lumber.

They are ESR code approved under ICC Report ESR-3201.

#### **RSS™ RUGGED STRUCTURAL SCREWS:**

Speedy lag bolt alternative with Immense drawing power. Ideal for use anywhere you would use a traditional lag screw and more, but with no pre-drilling required. For use in all applications including pressure treated lumber. They are self tapping eliminating pre-drilling featuring a washer head with cutting teeth, W-Cut<sup>™</sup> for reducing torque, CEE Thread<sup>™</sup> for no splitting, reducing install torque and our Climatek<sup>™</sup> AC257 code approved coating. They are ESR code approved under ICC Report ESR-2442.

NEW! RSS™ Black: Designed for an architectural finish

**RSS™ JTS:** Joist & Truss Fastener: Used for joists and trusses.

**RSS™ LTF:** Timber Frame Fastener: Designed specifically for the Log Home & Timber frame market.

#### KAMELEON™ COMPOSITE DECK SCREWS:

Heads blend in with decking with no mushrooming effect. Use in plastic or composite decking. They come in a variety of deck matching colours of which Grey, Brown and Tan are approved for use with Trex Select™ deck boards.

The Kameleon screws are self tapping featuring fibre trapping rings, a countersinking head with cutting teeth, CEE Thread™, W-Cut™ threads for reduced torque and our Climatek™ AC257 code approved coating. They are ESR code approved under ICC Report ESR-3201.

## Fastener Selection Guide and Quick Reference Product Locator

### **DECK ELITE**

GRK's Deck Elite<sup>™</sup> was designed with the Pro in mind and for high volume deck building for ACQ Material. The Fast Bite Tip allows for immediate engagement with deck boards. The W-Cut reduces torque for faster drive and ease of install. The tan colour matches perfectly with most commonly used deck boards, resulting in a clean finish.

Deck Elite<sup>™</sup> screws feature a corrosion resistant coating that is backed by its lifetime guarantee against rust. Generic Screws will not come anywhere close to the Deck Elite<sup>™</sup> coating.

Not approved by AC257 nor ICC.

#### FIN/TRIM™ TRIM HEAD SCREWS:

Smallest head on the market for a clean finish. Perfect for all interior and exterior finishing applications including deck rails, exterior wood trim, stairs, banisters, window and door trim, base boards, crown moulding and joining cabinets. For use in all applications including pressure treated lumber.

They are self-tapping eliminating pre-drilling featuring the W-Cut<sup>™</sup> threads for reduced torque, and our Climatek<sup>™</sup> AC257 code approved coating. They are ESR code approved under ICC Report ESR-3201.

#### **RT COMPOSITE™ TRIM HEAD SCREWS:**

Reverse thread design prevent mushrooming for a clean finish. Engineered for use in exterior applications including classic composite trim and decking, cPVC trim and moulding. For use in all applications including pressure treated lumber. RT<sup>™</sup> Composite Trim screws are self-tapping eliminating pre-drilling featuring the W-Cut<sup>™</sup> threads for reduced torque, and our Climatek<sup>™</sup> AC257 code approved coating. They are ESR code approved under ICC Report ESR-3201.

#### LOW PROFILE CABINET<sup>™</sup> SCREWS:

Built in washer head presses in flush against any material. Used for cabinet and vinyl siding installation. These unique screws are thin enough to prevent most material splitting, while providing sufficient strength to guarantee a secure installation.

They are self tapping eliminating pre-drilling featuring the W-Cut<sup>™</sup> threads for reduced torque and our Climatek<sup>™</sup> AC257 code approved coating.

#### **TOP STAR™ SHIM SCREWS:**

For plumb installation of wooden door and window frames. No more shims! Other uses include cabinets, insulation, paneling and built-in-wall units.

The two-piece "unique screw within a screw" design reduces labour when installing wooden doors or windows. A unique 2 piece crown/bit allows for quick and easy driving.

#### **CALIBURN™ SCREWS:**

Heavy duty concrete and masonry fastener. For attaching a variety of materials and fixtures to concrete. Easy driving high carbon steel allows the screws to create threads while being driven into the concrete. Proper pre-drilling with correct drill bit required. Caliburn™ screws are Climatek™ AC257 code approved coating.

Caliburn Screw: Tapered concrete screw for securing wood.

Caliburn<sup>™</sup> PH Screw: Pan head concrete screw for a more aesthetic look Caliburn<sup>™</sup> XL Screws: Washer head style concrete screw for strong connections

# AugerBolt™ Through Bolt Fasteing

# Throughbolt Fastening

## **DESCRIPTION/SUGGESTED SPECIFICATIONS**

## Thoughbolt Fastening—

The GRK AugerBolt<sup>™</sup> simplifies the installation process of throughbolts by combining the drilling and install steps and eliminating loose components. 2x FASTER than standard throughbolt installation.

IDEAL FOR: Throughbolted connections and Post to Beam Installation.

### ADVANTAGES

# **INTEGRATED** WASHER HEAD Fewer components

**RECESSED TIP** One step install

**AUGER DRILL BIT INCLUDED** 

Fast drilling

# **TREATED LUMBER APPROVED**

# AugerBolt<sup>™</sup> Through Bolt Fastening

### INSTALLATION

- 1. Insert auger bit into recess in bolt tip
- 2. Drill hole and set bolt in single motion
- 3. Remove auger bit from bolt tip
- 4. Add washer and tighten nut

### SELECTION CHART

U.S. (STD.) SIZE (DIA. X LENGTH)	PART NO.	QTY.
1/2 x 7	81271C	10

\* nuts and washers included in each package

# Frame with Ease and Confidence

### **APPROVALS/LISTING**

## **DESCRIPTION/SUGGESTED SPECIFICATIONS**

## Multi-Purpose Framing Screws—

GRK's R4<sup>™</sup> self-countersinking screw has a patented underhead with saw-blade like cutting teeth and six self-contained cutting pockets. Together they act similar to a circular saw-blade, transporting the drill dust away from the edge of the screw hole while cutting a perfectly clean hole into even the most brittle materials without cracking any surface treatment.

# <u>Über</u>Grade<sup>™</sup>

This design enhances the  $R4^{m's}$  versatility by allowing the fastener to countersink into even the hardest woods. The head of the screw closes the hole off with precision, leaving no damaged fibres around the head.

R4<sup>™</sup> screws 2" and longer have a four threaded CEE Thread. This enlarges the screw hole for the non-threaded portion of the fastener, allowing the wood to settle easily. It increases the screw's drawing strength and reduces the friction on the screw shank that lowers the driving torque.

Select sizes now available in Black!

### ADVANTAGES

- Recessed Star Drive: Zero Stripping, with 6 points of contact.
- CEE Thread: Enlarges hole to reduce splitting, install torque.
- W-Cut<sup>™</sup>: Low torque, smoother drive, reduce splitting.
- Zip-Tip<sup>™</sup>: No pre-drilling, faster penetration, reduce splitting.
- **Cutting Pockets:** provide a clean hole, reduces splitting, and bore with precision.
- **ESR-3201 Approved** for structural application.
- Case Hardened Steel: for high tensile, torque and shear strength.
- Climatek<sup>™</sup> Coating is AC257 code approved for use in treated lumber.
- For interior/exterior use in; wood, plastic, cement fibre board, particle board, sheet metal, wood decking and melamine.

<sup>1</sup> Resistance values have been developed in accordance with Clause 12.11 "Wood Screws" CSA 086-14 and have been factored with the material resistance factor (φ). No other modification factors affecting resistance have been applied. Values must be multiplied by all applicable modification factors as specified for wood screws in accordance with CSA 086-14.

<sup>2</sup> ICC ESR-3201 report can be referred to for information not provided in this table. Note that resistance values of GRK R4 screw connections with cold-formed steel, mild steel and plywood side members have not been developed in the ICC ESR-3201 report.

<sup>3</sup> Multiply lateral resistance values by 0.83 for toe-screw installation and by 0.67 for end-grain installation. Toe-screw and end-grain installations are not permitted for screws loaded in withdrawal.

<sup>4</sup> Minimum row spacing, spacing in row and edge distances, penetration lengths, and member thicknesses shall be as specified in Clause 12.11.2 CSA 086-14. The minimum spacing table provided in this catalogue can be used for reference.

<sup>5</sup> '---' indicates the screw cannot be used for the resistance due to the screw length not meeting the minimum penetration length into the point-side member. Resistance values have been developed assuming the screw is fully penetrated into the point-side member.

<sup>6</sup> Resistance values with mild steel side member have been developed for mild steel referenced in CSA S16 (ASTM A36/A36M steel; fu = 400 MPa). Resistance values with cold-formed steel side member have been developed for cold-formed steel light gauge steel referenced in CSA S136 (Grade SS 230; fu = 310 MPa).

<sup>7</sup> Convert inches to millimetres by multiplying the value by 25.4 (1 in. = 25.4 mm).

Visit GRK Fasteners web site www.grkfasteners.ca for the most current product and technical information.

<sup>1</sup> Resistance values have been developed in accordance with Clause 12.11 "Wood Screws" CSA 086-14 and have been factored with the material resistance factor (φ). No other modification factors affecting resistance have been applied. Values must be multiplied by all applicable modification factors as specified for wood screws in accordance with CSA 086-14.

<sup>2</sup> ICC ESR-3201 report can be referred to for information not provided in this table. Note that resistance values of GRK R4 screw connections with cold-formed steel, mild steel and plywood side members have not been developed in the ICC ESR-3201 report.

<sup>3</sup> Multiply lateral resistance values by 0.83 for toe-screw installation and by 0.67 for end-grain installation. Toe-screw and end-grain installations are not permitted for screws loaded in withdrawal.

<sup>4</sup> Minimum row spacing, spacing in row and edge distances, penetration lengths, and member thicknesses shall be as specified in Clause 12.11.2 CSA 086-14. The minimum spacing table provided in this catalogue can be used for reference.

<sup>5</sup> '---' indicates the screw cannot be used for the resistance due to the screw length not meeting the minimum penetration length into the point-side member. Resistance values have been developed assuming the screw is fully penetrated into the point-side member.

<sup>6</sup> Resistance values with mild steel side member have been developed for mild steel referenced in CSA S16 (ASTM A36/A36M steel; fu = 400 MPa). Resistance values with cold-formed steel side member have been developed for cold-formed steel light gauge steel referenced in CSA S136 (Grade SS 230; fu = 310 MPa).

<sup>7</sup> Convert inches to millimetres by multiplying the value by 25.4 (1 in. = 25.4 mm).

<sup>1</sup> Resistance values have been developed in accordance with Clause 12.11 "Wood Screws" CSA 086-14 and have been factored with the material resistance factor (φ). No other modification factors affecting resistance have been applied. Values must be multiplied by all applicable modification factors as specified for wood screws in accordance with CSA 086-14.

<sup>2</sup> ICC ESR-3201 report can be referred to for information not provided in this table. Note that resistance values of GRK R4 screw connections with cold-formed steel, mild steel and plywood side members have not been developed in the ICC ESR-3201 report.

<sup>3</sup> Multiply lateral resistance values by 0.83 for toe-screw installation and by 0.67 for end-grain installation. Toe-screw and end-grain installations are not permitted for screws loaded in withdrawal.

<sup>4</sup> Minimum row spacing, spacing in row and edge distances, penetration lengths, and member thicknesses shall be as specified in Clause 12.11.2 CSA 086-14. The minimum spacing table provided in this catalogue can be used for reference.

<sup>5</sup> '---' indicates the screw cannot be used for the resistance due to the screw length not meeting the minimum penetration length into the point-side member. Resistance values have been developed assuming the screw is fully penetrated into the point-side member.

<sup>6</sup> Resistance values with mild steel side member have been developed for mild steel referenced in CSA S16 (ASTM A36/A36M steel; fu = 400 MPa). Resistance values with cold-formed steel side member have been developed for cold-formed steel light gauge steel referenced in CSA S136 (Grade SS 230; fu = 310 MPa).

<sup>7</sup> Convert inches to millimetres by multiplying the value by 25.4 (1 in. = 25.4 mm).

<sup>1</sup> Resistance values have been developed in accordance with Clause 12.11 "Wood Screws" CSA 086-14 and have been factored with the material resistance factor (φ). No other modification factors affecting resistance have been applied. Values must be multiplied by all applicable modification factors as specified for wood screws in accordance with CSA 086-14.

<sup>2</sup> ICC ESR-3201 report can be referred to for information not provided in this table. Note that resistance values of GRK R4 screw connections with cold-formed steel, mild steel and plywood side members have not been developed in the ICC ESR-3201 report.

<sup>3</sup> Multiply lateral resistance values by 0.83 for toe-screw installation and by 0.67 for end-grain installation. Toe-screw and end-grain installations are not permitted for screws loaded in withdrawal.

<sup>4</sup> Minimum row spacing, spacing in row and edge distances, penetration lengths, and member thicknesses shall be as specified in Clause 12.11.2 CSA 086-14. The minimum spacing table provided in this catalogue can be used for reference.

<sup>5</sup> '---' indicates the screw cannot be used for the resistance due to the screw length not meeting the minimum penetration length into the point-side member. Resistance values have been developed assuming the screw is fully penetrated into the point-side member.

<sup>6</sup> Resistance values with mild steel side member have been developed for mild steel referenced in CSA S16 (ASTM A36/A36M steel; fu = 400 MPa). Resistance values with cold-formed steel side member have been developed for cold-formed steel light gauge steel referenced in CSA S136 (Grade SS 230; fu = 310 MPa).

<sup>7</sup> Convert inches to millimetres by multiplying the value by 25.4 (1 in. = 25.4 mm).

Resistance values have been developed in accordance with Clause 12.11 "Wood Screws" CSA 086-14 and have been factored with the material resistance factor (φ). No other modification factors affecting resistance have been applied. Values must be multiplied by all applicable modification factors as specified for wood screws in accordance with CSA 086-14.

<sup>2</sup> ICC ESR-3201 report can be referred to for information not provided in this table. Note that resistance values of GRK R4 screw connections with cold-formed steel, mild steel and plywood side members have not been developed in the ICC ESR-3201 report.

Multiply lateral resistance values by 0.83 for toe-screw installation and by 0.67 for end-grain installation. Toe-screw and end-grain installations are not permitted for screws loaded in withdrawal.

<sup>4</sup> Minimum row spacing, spacing in row and edge distances, penetration lengths, and member thicknesses shall be as specified in Clause 12.11.2 CSA 086-14. The minimum spacing table provided in this catalogue can be used for reference.

<sup>5</sup> '---' indicates the screw cannot be used for the resistance due to the screw length not meeting the minimum penetration length into the point-side member. Resistance values have been developed assuming the screw is fully penetrated into the point-side member.

<sup>6</sup> Resistance values with mild steel side member have been developed for mild steel referenced in CSA S16 (ASTM A36/A36M steel; fu = 400 MPa). Resistance values with cold-formed steel side member have been developed for cold-formed steel light gauge steel referenced in CSA S136 (Grade SS 230; fu = 310 MPa).

<sup>7</sup> Convert inches to millimetres by multiplying the value by 25.4 (1 in. = 25.4 mm).

<sup>1</sup> Resistance values have been developed in accordance with Clause 12.11 "Wood Screws" CSA 086-14 and have been factored with the material resistance factor (φ). No other modification factors affecting resistance have been applied. Values must be multiplied by all applicable modification factors as specified for wood screws in accordance with CSA 086-14.

<sup>2</sup> ICC ESR-3201 report can be referred to for information not provided in this table. Note that resistance values of GRK R4 screw connections with cold-formed steel, mild steel and plywood side members have not been developed in the ICC ESR-3201 report.

<sup>3</sup> Multiply lateral resistance values by 0.83 for toe-screw installation and by 0.67 for end-grain installation. Toe-screw and end-grain installations are not permitted for screws loaded in withdrawal.

<sup>4</sup> Minimum row spacing, spacing in row and edge distances, penetration lengths, and member thicknesses shall be as specified in Clause 12.11.2 CSA 086-14. The minimum spacing table provided in this catalogue can be used for reference.

<sup>5</sup> '---' indicates the screw cannot be used for the resistance due to the screw length not meeting the minimum penetration length into the point-side member. Resistance values have been developed assuming the screw is fully penetrated into the point-side member.

<sup>6</sup> Resistance values with mild steel side member have been developed for mild steel referenced in CSA S16 (ASTM A36/A36M steel; fu = 400 MPa). Resistance values with cold-formed steel side member have been developed for cold-formed steel light gauge steel referenced in CSA S136 (Grade SS 230; fu = 310 MPa).

<sup>7</sup> Convert inches to millimetres by multiplying the value by 25.4 (1 in. = 25.4 mm).

<sup>1</sup> Resistance values have been developed in accordance with Clause 12.11 "Wood Screws" CSA 086-14 and have been factored with the material resistance factor (φ). No other modification factors affecting resistance have been applied. Values must be multiplied by all applicable modification factors as specified for wood screws in accordance with CSA 086-14.

<sup>2</sup> ICC ESR-3201 report can be referred to for information not provided in this table. Note that resistance values of GRK R4 screw connections with cold-formed steel, mild steel and plywood side members have not been developed in the ICC ESR-3201 report.

<sup>3</sup> Multiply lateral resistance values by 0.83 for toe-screw installation and by 0.67 for end-grain installation. Toe-screw and end-grain installations are not permitted for screws loaded in withdrawal.

<sup>4</sup> Minimum row spacing, spacing in row and edge distances, penetration lengths, and member thicknesses shall be as specified in Clause 12.11.2 CSA 086-14. The minimum spacing table provided in this catalogue can be used for reference.

<sup>5</sup> '---' indicates the screw cannot be used for the resistance due to the screw length not meeting the minimum penetration length into the point-side member. Resistance values have been developed assuming the screw is fully penetrated into the point-side member.

<sup>6</sup> Resistance values with mild steel side member have been developed for mild steel referenced in CSA S16 (ASTM A36/A36M steel; fu = 400 MPa). Resistance values with cold-formed steel side member have been developed for cold-formed steel light gauge steel referenced in CSA S136 (Grade SS 230; fu = 310 MPa).

<sup>7</sup> Convert inches to millimetres by multiplying the value by 25.4 (1 in. = 25.4 mm).

Speedy Lag Bolt Alternative with Immense Drawing Power

### **APPROVALS/LISTING**

FASTENERS

### **Rugged Structural Screws**—

GRK's RSS<sup>™</sup> screw is made of specially hardened steel to provide you with high tensile, torque and shear strength. The sharp threads and points bite instantly into the material (including hardwood), reducing the splitting effect due to smaller shanks.

RSS<sup>™</sup> screws that are 3" 1/8" and longer have CEE Threads which enlarge the screw hole for the non-threaded portion of the fastener, allowing the wood to settle easily and increases the screw's drawing strength. The CEE Thread also reduces the friction on the screw shank which can result in lowering the driving torque and the likelihood of splitting the wood. This is why the RSS<sup>™</sup> screw is an efficient lag screw alternative.

## <u>Über</u>Grade<sup>™</sup>

Our round head with built-in shield (washer type head) has no sharp edges like conventional lag screws. The added shoulder (nominal diameter) underneath the washer has the ability to center the RSS<sup>™</sup> screw in pre-drilled hardware like hinges and connector plates.

NEW! RSS<sup>™</sup> Black: Designed for an architectural finish RSS<sup>™</sup> JTS - Used for joists and trusses RSS<sup>™</sup> LTF - Designed for log home and timber frame

### ADVANTAGES

- Recessed Star Drive: Zero Stripping, with 6 points of contact.
- CEE Thread: Enlarges hole to reduce splitting, install torque.
- W-Cut<sup>™</sup>: Low torque, smoother drive, reduce splitting.
- Zip-Tip<sup>™</sup>: No pre-drilling, faster penetration, reduce splitting.
- Washer Head: for immense holding power.
- Cutting Pockets: provide a clean hole, reduces splitting, and bore with precision.
- **ESR-2442 Approved** for structural application.
- Case Hardened Steel: for high tensile, torque and shear strength.
- Climatek<sup>™</sup> Coating is AC257 code approved for use in treated lumber.

- For interior/exterior use in; carrying beams, ledger boards, stair rails, deck posts, playground equipment and other professional applications.
- Advantages: Factored Resistances as per CSA 086-14

<sup>1</sup> Lag Screw Factored Resistances have been developed in accordance with 12.6 CSA 086-14. Apply adjustment factors where applicable.

<sup>2</sup> Factored withdrawn resistance shown assume the entire threaded portion of the screw is installed In to the main member

<sup>3</sup> Minimum spacing ,edge and end distances shall be in accordance with 12.6 .2 CSA 086-14

<sup>4</sup> GRK RSS Screw spacing must comply with 12.11.5 CSA 086-14 (See Spacing Tables)

<sup>5</sup> Dimensions of Lag screw based on Table 15 & 16 ASME B18.2.1-2012

### **EXAMPLE DECK DESIGN: ATTACHING LEDGER BOARD TO YOUR HOUSE!**

### **Assumptions:**

- Deck Span = 8' out from the house
- 10' Wide
- LL = 40 PSF; DL = 10 PSF

Total lateral resistance required = 2900 lbs

### LAG SOLUTION: 12 LAG SCREWS

FASTENERS

### **Possible Solutions:**

Using 1/4" by 3" Lag Bolts = 2900 / 242 = 12 lags

Using 3/8" by 3" Lag Bolts = 2900 / 249 = 12 Lags (see example below)

Using 1/2" by 3" Lag Bolts = 2900 / 320 = 9

Using 5/8" by 3" Lag Bolts = 2900 / 385 = 8

Using 3/8 \* 3.125 RSS = 2900 /366 = 8 screws (see example below)

### **RSS SOLUTION: 8 RSS SCREWS<sup>1</sup> NO PRE-DRILLING**

<sup>1</sup> RSS Spacing must comply with 12.11.5 CSA 086-14

# **RSS**<sup>™</sup> **Tehnical Data**

# Kameleon<sup>™</sup> Composite Deck Screws

Heads Blend in with Decking. No Mushrooming Effect

### **APPROVALS/LISTING**

FASTENERS

# DESCRIPTION/SUGGESTED SPECIFICATIONS Composite Deck Screws—

GRK's Kameleon<sup>™</sup> screws are an excellent choice for composite and PVC decking applications. The underhead has saw-blade like cutting teeth that cut a perfectly clean hole into the decking.

The Kameleon<sup>™</sup> also features five to seven rings that have three indented fibre traps on each ring designed to trap fibres and eliminate the mushroom effect.

# <u>Über</u>Grade<sup>™</sup>

The CEE Thread feature enlarges the screw hole allowing the composite decking to settle easily, increases the screw's drawing strength, and reduces the friction on the screw shank, which can result in lowering the overall driving torque.

The Kameleon™ is also available in many different colors including: Grey, Brown, and Tan.

### ADVANTAGES

- Recessed Star Drive: Zero Stripping, with 6 points of contact.
- **CEE Thread:** Enlarges hole to reduce splitting, install torque.
- W-Cut<sup>™</sup>: Low torque, smoother drive, reduce splitting.
- **Zip-Tip™:** No pre-drilling, faster penetration, reduce splitting.
- Fibre Trapping Rings: are designed to prevent mushrooming and dimpling.
- Cutting Pockets: provide a clean hole, reduces splitting, and bore with precision.
- **ESR-3201 Approved** for structural application.
- Case Hardened Steel: for high tensile, torque and shear strength.
- Climatek<sup>™</sup> Coating is AC257 code approved for use in treated Iumber.
- For interior/exterior use in; both composite and PVC decking.

## Kameleon<sup>™</sup> Composite Deck Screws

Smallest Head on the Market for a Clean Finish

### **DESCRIPTION/SUGGESTED SPECIFICATIONS**

## Finishing Trim Head Screws—

GRK's Trim<sup>™</sup> Head screws are an excellent choice for most fine carpentry applications, as well as window extension jambs and more. Our Trim<sup>™</sup> Head screws have the smallest screw head available; with screw lengths from 1-1/4<sup>™</sup> (30 mm) to 5<sup>™</sup> (125 mm).

## <u>Über</u>Grade<sup>™</sup>

Most material splitting is prevented because of the Trim™ Head screw's exceptionally small head and the W-Cut thread design.

Fin/Trim<sup>™</sup> screws are also available in white Climatek<sup>™</sup> coated finish to blend in with white wooden trim boards.

### ADVANTAGES

- Recessed Star Drive: Zero Stripping, with 6 points of contact.
- Trim Head: for a clean finished look.
- W-Cut™: Low torque, smoother drive.
- **Zip-Tip™:** No pre-drilling, faster penetration.
- **ESR-3201 Approved** for structural application.
- Case Hardened Steel: for high tensile, torque and shear strength.
- Climatek<sup>™</sup> Coating is AC257 code approved for use in treated lumber.
- For interior/exterior use.
- Available in Climatex<sup>™</sup> or white powder coated finish.

Reverse Thread Design Prevents Mushrooming

# APPROVALS/LISTING

# **DESCRIPTION/SUGGESTED SPECIFICATIONS**

# **Exterior Trim Screws**-

GRK has modified its innovative FIN/Trim<sup>™</sup> Head screw to include reverse threading under the head of the fastener. This technology makes the RT Composite<sup>™</sup> Trim Screw ideal for use in composite and cellular PVC trim.

# <u>Über</u>Grade<sup>™</sup>

Based on extensive tests, GRK has found that the reverse thread helps the screw head disappear beneath the surface of the classic wood composite material, reducing or eliminating the dimple that sometimes appears when using the FIN/Trim<sup>™</sup> screw.

The reverse thread feature is available in RT Composite<sup>™</sup> screws from 2" to 3-1/8" in length in both regular Climatek<sup>™</sup> coating and in white Climatek<sup>™</sup> coated finish to blend in with popular white exterior composite and cellular PVC trim.

# **ADVANTAGES**

- Recessed Star Drive: Zero Stripping, with 6 points of contact.
- Reverse Threads eliminate mushrooming.
- **Trim Head:** for a clean finished look.
- W-Cut<sup>™</sup>: Low torque, smoother drive and reduce splitting.
- Zip-Tip<sup>™</sup>: No pre-drilling, faster penetration and reduce splitting.
- **ESR-3201 Approved** for structural application.
- Case Hardened Steel: for high tensile, torque and shear strength.
- Climatek<sup>™</sup> Coating is AC257 code approved for use in treated lumber.
- For interior/exterior use in; exterior PVC trim (Azek, Kleer, Koma), no pre-drilling is necessary.
   Climatek<sup>™</sup> coated screws work well with CAMO system.
- Available in Climatex<sup>™</sup> or white powder coated finish.

# Low Profile Cabinet<sup>™</sup> Screws

Built-in Washer Head Presses Flush Against any Material

## **APPROVALS/LISTING**

# **GRK** FASTENERS

# **DESCRIPTION/SUGGESTED SPECIFICATIONS**

# **Cabinet Screws**—

GRK's Cabinet<sup>™</sup> screws are designed specifically for use in cabinet construction and installation. Cabinet<sup>™</sup> screws are manufactured in a #8 gauge (4 mm) diameter for universal size convenience.

These screws are thin enough to prevent most material splitting, while providing sufficient strength to guarantee a secure installation. The washer head design presses flush against any material surface.

# <u>Über</u>Grade<sup>™</sup>

Builders have discovered that short Cabinet<sup>™</sup> screws can sometimes be used in vinyl siding installation, which makes this fastener ideal for both interior and exterior applications.

The Cabinet screw can also be used for light duty framing applications where a smaller diameter shank is necessary, yet a need exists for drawing power delivered by the washer head.

Now also available in white washer head style for an aesthetic finish

# ADVANTAGES

- Recessed Star Drive: Zero Stripping, with 6 points of contact.
- Washer Head: Creates a flush, clean hold for a strong and secure installation.
- W-Cut<sup>™</sup>: Low torque, smoother drive, reduce splitting.
- Zip-Tip<sup>™</sup>: No pre-drilling, faster penetration, reduce splitting.
- Case Hardened Steel: for high tensile, torque and shear strength.
- Climatek<sup>™</sup> Coating is AC257 code approved for use in treated lumber.
- For interior/exterior use.

Ideal for Cabinets...and so much more. Also excellent for a variety of interior or exterior jobs.

#### *ITW* Construction Products\*

# **Top Star**<sup>™</sup> Adjustable Shim Screws

For Plumb Installation of Wooden Doors and Windows. No More Shims!

# **DESCRIPTION/SUGGESTED SPECIFICATIONS**

# Adjustable Shim Screws—

GRK's adjustable Top Star<sup>™</sup> shim screw, is in fact a screw within a screw that allows you to install wooden doors or windows without the use of shims.

# <u>Über</u>Grade<sup>™</sup>

The quick and easy system reduces labour and allows for hassle free adjustment to ensure plumb installation.

Our product is suited to meet the needs of both professional contractors and weekend warriors making the job easier for one person.

Fine adjustments are as simple as the turn of a screw, even after years of use and settling.

### ADVANTAGES

- Recessed Star Drive: Zero Stripping, with 6 points of contact.
- **4-point 3/8" diameter Threaded Sleeve** provides a secure hold on your wooden frame.
- Micro-Adjustments allow for an absolutely plumb installation.
- Use with GRK's **Top Star<sup>™</sup> Crown** and **T-15** Star bit system.
- White Zinc Plated finish for lasting durability.
- For Shim Free installation of wooden doors, windows, insulation, paneling, built-in wall units and cabinets.

# Top Star<sup>™</sup> Adjustable Shim Screws

CROWN / BIT	CROWN / BIT							
Includes: (1) Crov	wn / Bit with each			86465	1			

The Bit drives the Top Star<sup>™</sup> into the material when the Crown and Bit are combined. Using the Bit without the Crown adjusts the distance.

The Threaded Sleeve moves independently from the Top Star™ unless locked by the Crown. When locked, the Top Star™ gets driven into the material. Unlocked, the installed Top Star™ is ready for levelling.

NOTE: Crown and Star bit system included in each bulk box. 5/16" drill bit not included.

# **Caliburn**™ Concrete Screws

Heavy Duty Concrete and Masonry Fastener

# **DESCRIPTION/SUGGESTED SPECIFICATIONS**

# **Concrete Screws**—

Cailburn<sup>™</sup> Concrete screws are professionally engineered fasteners with a patented thread design for ease of driving the screw in concrete and similar applications.

# <u>Über</u>Grade<sup>™</sup>

Available in three different head designs for multiple applications. Caliburn™, Caliburn™ PH and Caliburn™ XL are Climatek™ coated for high corrosion resistance.

Caliburn's uncompromised draw and pullout strength make it possible to be used in jobs which previously required an anchor. The screws aggressive thread design afford it the ability to be removed and reinserted into the same pilot hole numerous times—without the concern of the fastener breaking or the threads wearing.

## ADVANTAGES

- Recessed Star Drive: Zero Stripping, with 6 points of contact.
- Aggressive Heavy duty threads lock into concrete and can be removed and reinserted without screw damage.
- Countersinking Bugle Head locks wood to concrete for complete installation and effective anchoring.
- Caliburn<sup>™</sup> PH pan head, which is ideal for an exposed finished look including installation of electrical boxes.
- Caliburn<sup>™</sup> XL washer head design for superior holding power.
- Climatek<sup>™</sup> Coating is AC257 code approved for use in treated lumber.
- Ideal for use in anchoring to concrete or wood to concrete applications including basement framing and sheds.

# LIABILITY AND WARRANTIES

GRK Fasteners<sup>™</sup> is a distributor of commercial grade fasteners. Conformance to "IFI" specifications is formally requested from our suppliers. The parts that we supply are quality inspected by independent labs.

We maintain lot traceability on all products listed in this catalog as long as they are in their original bulk boxes. Certifications are maintained on all fasteners.

**Hydrogen Embrittlement:** We require our platers and suppliers of plated fasteners to bake case hardened parts to "IFI" specifications. However, this process does not guarantee that hydrogen embrittlement will not still be present after baking or that it will not occur at a later date while in service. Specialized testing or a substitute part may be required, depending on the application.

Liability: Claims against GRK Fasteners<sup>™</sup> shall be limited to a refund or credit for the price billed or paid for faulty or incorrect merchandise. Seller shall not be responsible for buyer's manufacturing costs, labour, alternate purchases, extra freight, replating, plating, lost profit, good will, recall costs, or other incidental or consequential damages.

**Warranties:** GRK Fasteners<sup>™</sup> ("GRK") warrants to the first retail purchaser that its Climatek<sup>™</sup> coated will not rust under normal environmental conditions when used in accordance with the recommendations listed in GRK's Screw Selection Guide. This warranty is not transferable.

**Refunds:** In order to receive a refund, the customer must return to us at least 50 of the defective screws (including screw heads) for verification.

THERE ARE NO UNDERSTANDINGS, AGREEMENTS, REPRESENTATIONS OR ADDITIONAL WARRANTIES, EXPRESSED OR IMPLIED (INCLUDING ANY REGARDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE), NOT SPECIFIED HEREIN, RESPECTING ANY SALE OF PRODUCTS BY GRK FASTENERS<sup>\*\*</sup>, (TO THE EXTENT PERMITTED BY LAW).

# Take Advantage of these Contractor Services from ITW Construction Products Canada

From job sites to engineering firms, from Safety Seminars to on-site services, we hope you take advantage of our many contractor services– at no charge! After all, it's one thing to offer the quality products you need to do your job. It's another to provide you with superior service, engineering expertise and total product support.

At ITW Construction Products Canada, we are proud of the partnerships we have built through the years with our distributor network and contractors. Thanks to quality products, innovative services and on-time delivery, we will continue to build new relationships and strengthen existing ones today... and into the next century.

- Factory representatives with years of training and service experience will go out to your job site to provide you with product, service and technical assistance.
- We provide architects and engineers with complete submittal packages which gives them the technical data needed to specify ITW Construction Products Canada products. Contact your ITW Construction Products Canada Distributor or your nearest Customer Service location to request submittal packages.

#### **Technical Application Assistance:**
